Deployment Maker

Who is deployed where, with a sign-in, break and stand-down log

Guide for	**Event leads planning a deployment, and event control running it on the day**
Made by	**Finlay Russell — finlay3110@gmail.com**
Licence	**MIT — provided as is, with no warranty**

Before you use anything this produces. This tool formats what you type. It does not check it. You are responsible for making sure each deployment meets your organisation's and the event's requirements.

1. What it does

3. The event
4. Units and people
5. On the day
6. The PDF
7. Plans for venues
8. Saving and backing up
9. Phones, tablets and offline
10. Troubleshooting

1. What it does

Deployment Maker plans who is deployed where at an event, and produces a printed deployment log for the day. For each unit it records the callsign, whether it is an ambulance (with its registration), where it is posted or whether it roams, its kit bag and drug bag, and the people on it: name, clinical grade, radio and whether they are a manager.

On the day, event control can sign people in, record breaks and stand people down in the app, or print the log and do it on paper. Either way, signatures are done on paper.

> **Everything stays on your device.** There is no account and no upload. Once opened, it works offline.

2. Getting started

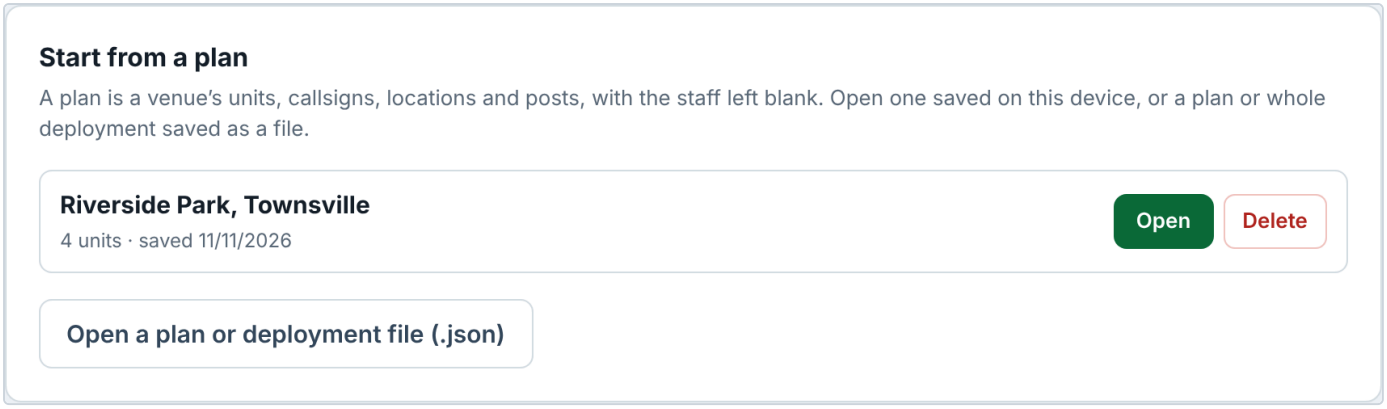

Open the Ambulance Tools home page and choose **Deployment Maker**. Set up your **Company Profile** first (Step 1 on the home page): the Deployment Maker picks it up by itself.

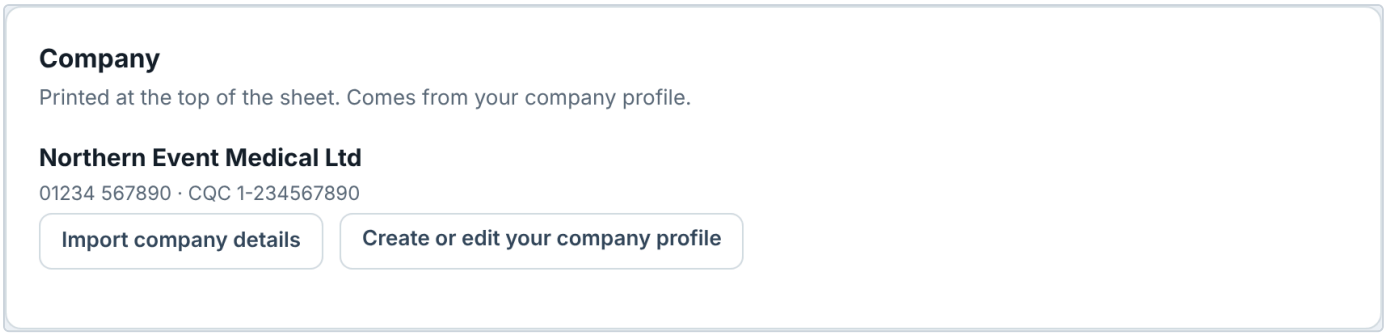

The top bar. **Generate PDF** works from any tab; **Clear all** empties the event and units but keeps your company details.

1. **Event** — start from a plan, check the company, fill in the event.
2. **Units** — each unit and the people on it.
3. **On the day** (only if turned on) — sign people in, breaks, stand down.
4. **Generate** — the PDF, and saving for later.

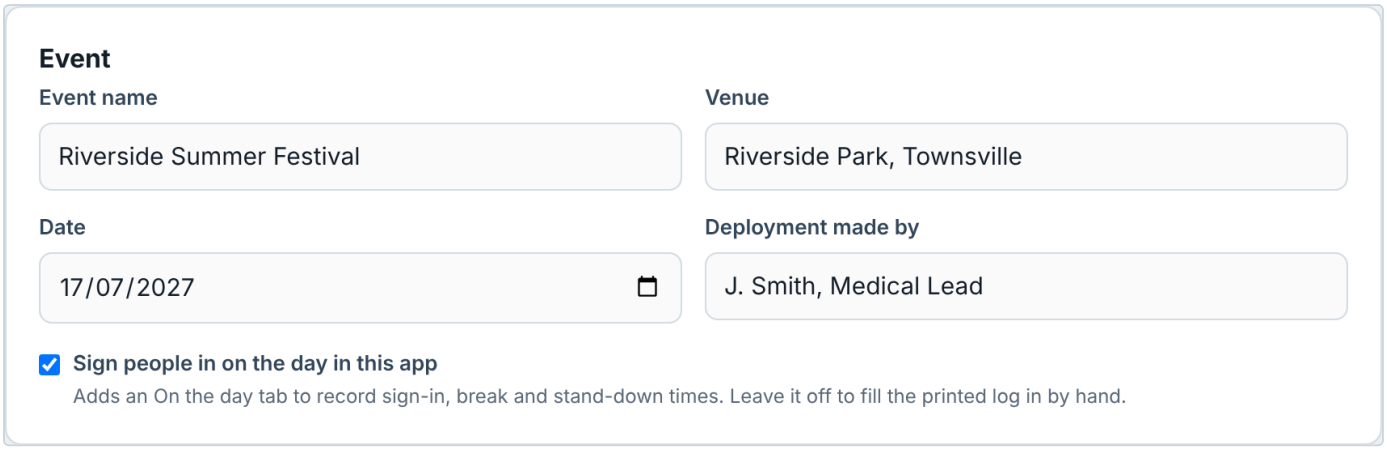

3. The event

Plans saved on this device, ready to open (section 7).

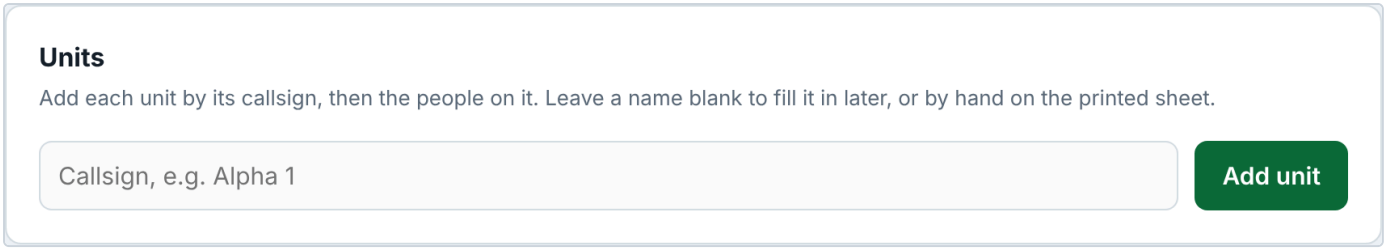

Company details come from your Company Profile. **Import company details** takes a company file instead.

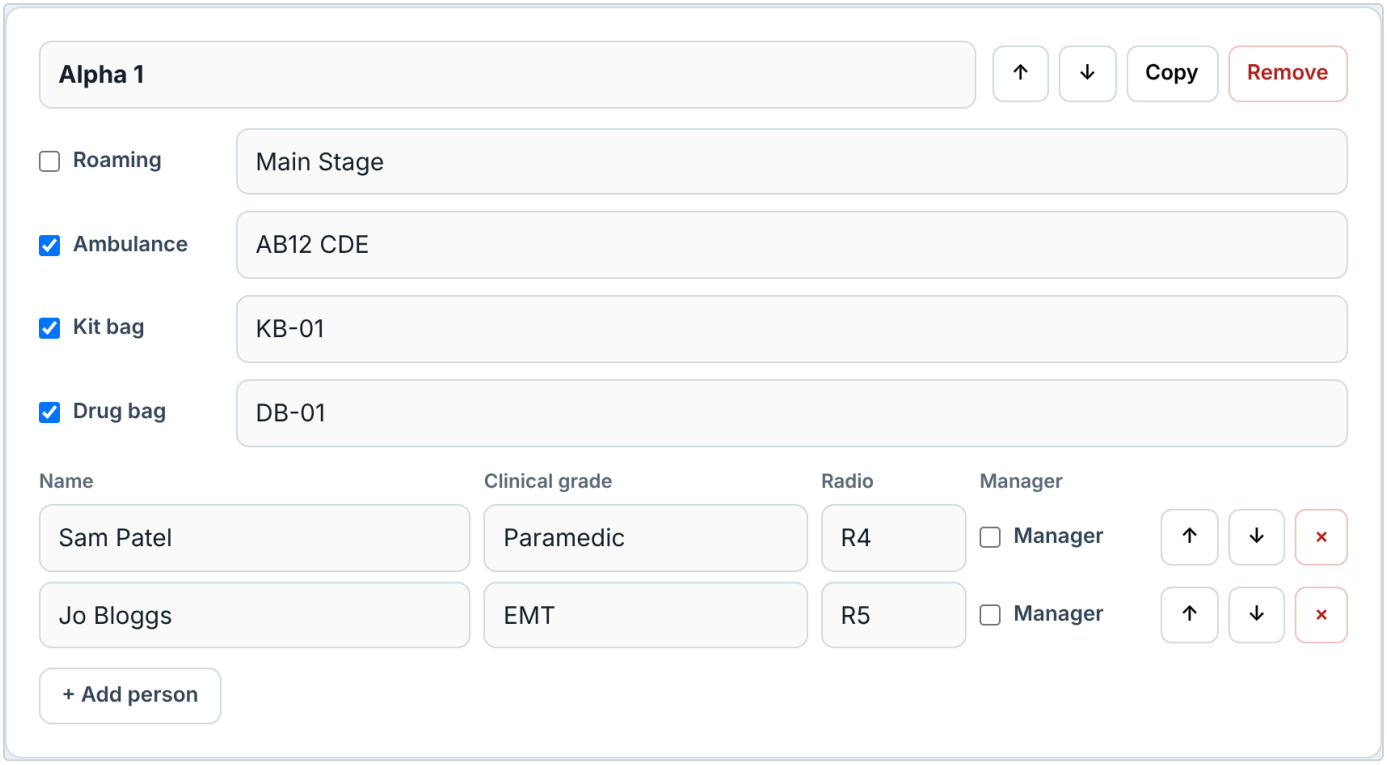

Event name, venue, date and who made the deployment are printed at the top of the log. Any left blank print as a box to write in.

4. Units and people

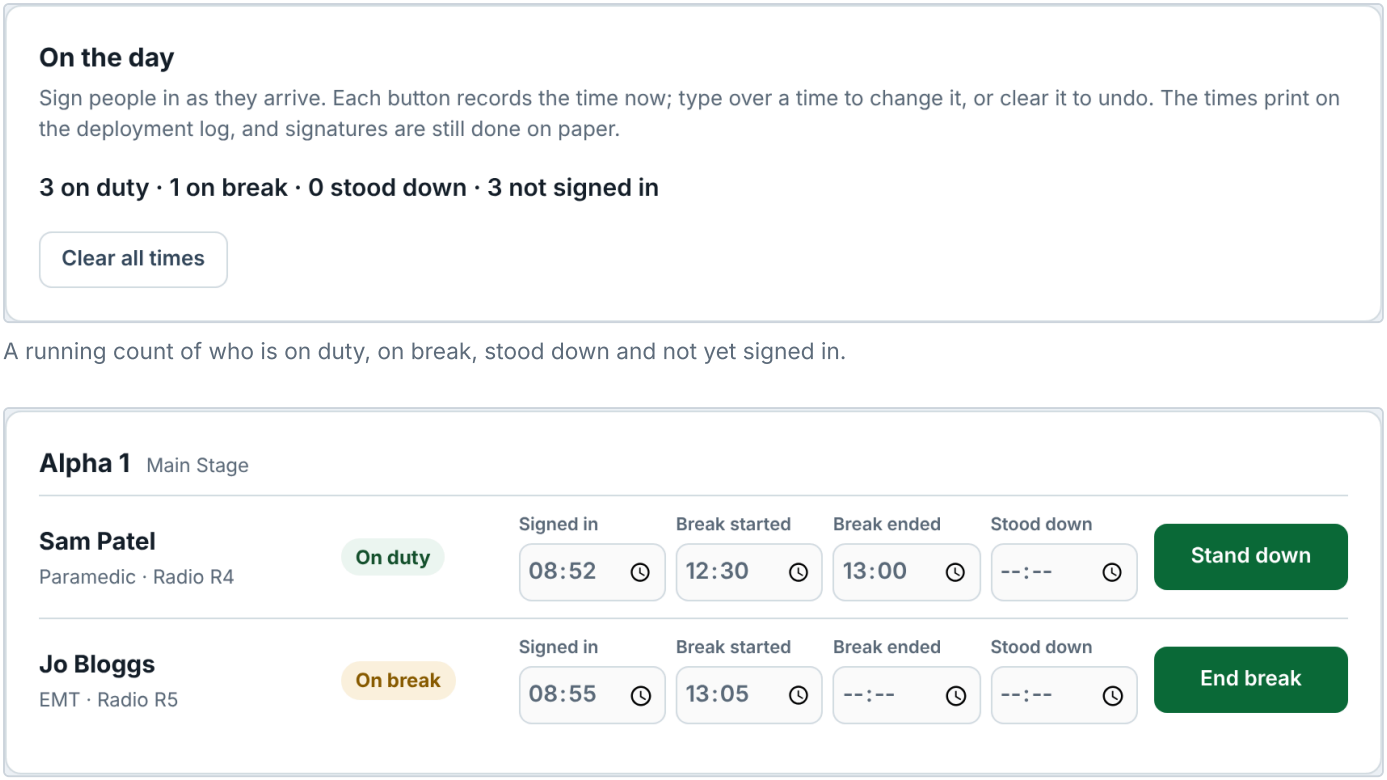

Type a callsign and press **Add unit**. Then, on the unit:

- **Roaming**, or the **location** it is posted to.
- **Ambulance** — tick it and it asks for the vehicle registration.
- **Kit bag** and **Drug bag** — untick them for a unit with none, such as event control. Leave a number blank to write it in on the day. Bag numbers set up in the Bag Tracker and Drug Bag Tracker on this device are suggested as you type.
- **People** — name, clinical grade, radio and a **Manager** tick. Leave a name blank for a post still to fill. **+ Add person** adds a row.
- **Copy** makes the next callsign (Alpha 1 to Alpha 2) with the same set-up and nobody on it yet. ↑ ↓ reorder; **Remove** deletes the unit.

5. On the day

Most events fill the printed log in by hand, so this tab is hidden until you tick **Sign people in on the day in this app** on the Event tab. The tick is saved with the deployment and its plan.

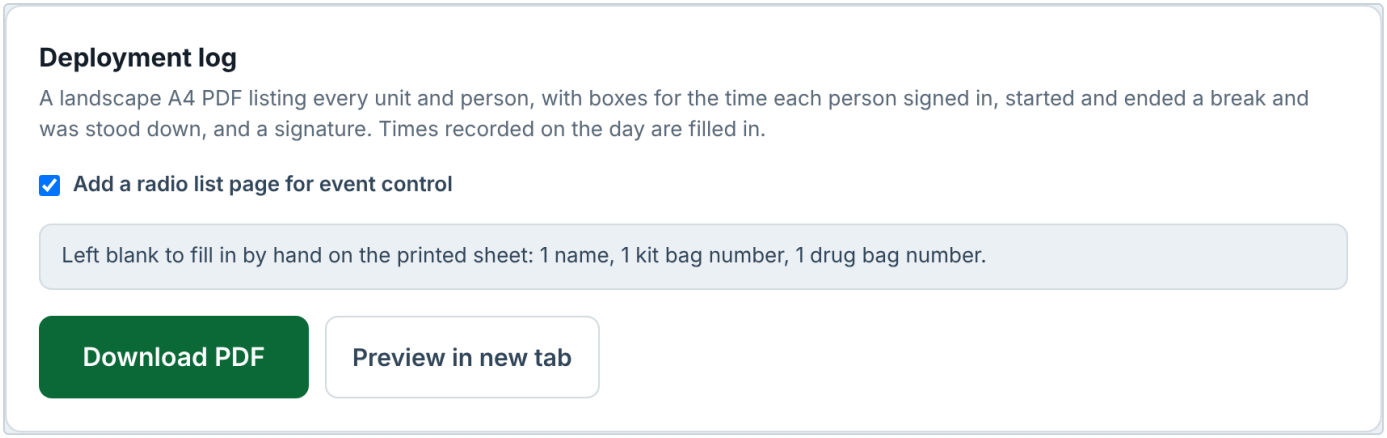

A running count of who is on duty, on break, stood down and not yet signed in.

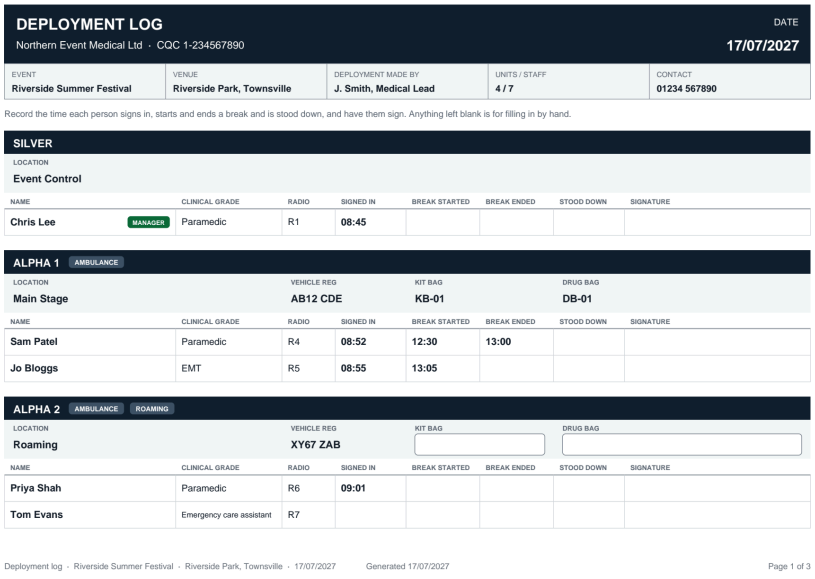

- Tap **Sign in**, **Start break**, **End break** or **Stand down**: each records the time now. Someone can stand down without taking a break.
- Type over a time to change it, or clear it to undo.
- A post with no name has a name box, to fill in as the person arrives.
- **Clear all times** starts the day again, keeping names and units.

The times are filled in on the deployment log. Signatures are still collected on paper.

6. The PDF

A landscape A4 deployment log. Each unit is its own block: a dark band with the callsign (tagged AMBULANCE or ROAMING), a strip with its location, registration and bags, and a row per person with boxes for **signed in**, **break started**, **break ended**, **stood down** and a **signature**. Managers have a green MANAGER badge. Anything left blank is a box to write in.

DEPLOYMENT LOG

Northern Event Medical Ltd · CQC 1-234567890

DATE 17/07/2027

EVENT	VENUE	DEPLOYMENT MADE BY	UNITS / STAFF	CONTACT
Riverside Summer Festival	Riverside Park, Townsville	J. Smith, Medical Lead	4 / 7	01234 567890

Record the time each person signs in, starts and ends a break and is stood down, and have them sign. Anything left blank is for filling in by hand.

FOOT 1	Roaming	Ali Khan	FREC 4	**R8**
			First responder	

7. Plans for venues

A venue that uses the same units each time needs a plan: the units, callsigns, locations, ambulances, which units have bags, and each post's grade and manager tick, with the names, radios, bag numbers, registrations, times and date left blank.

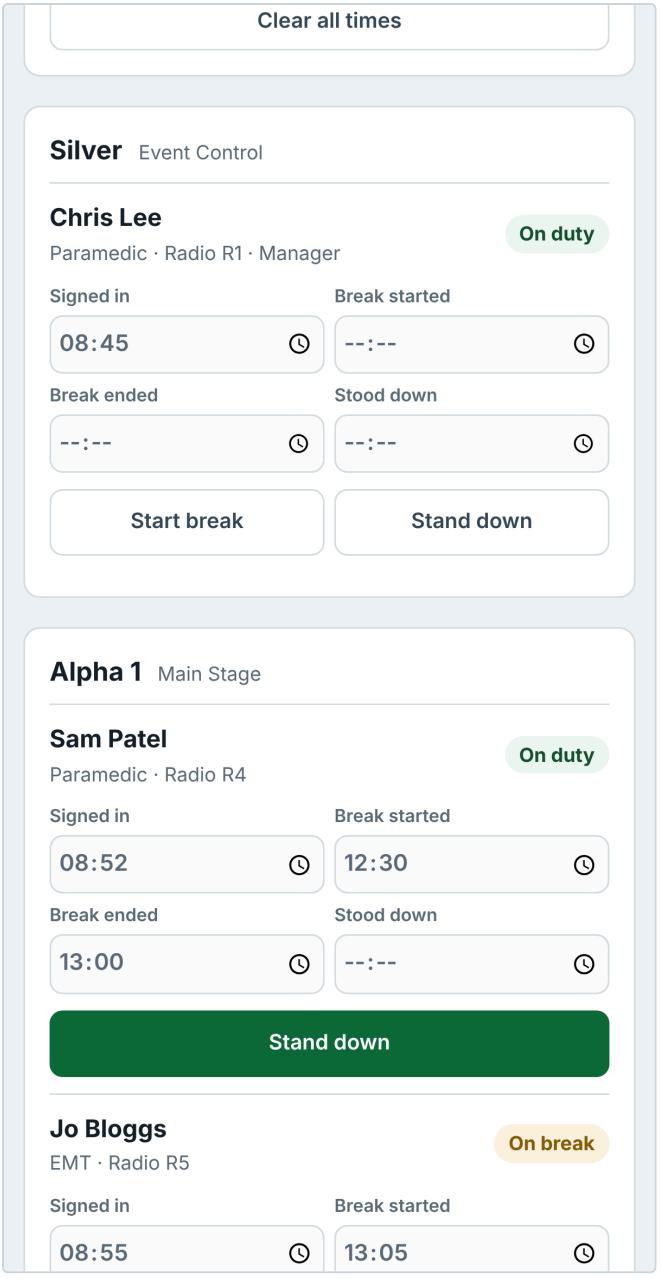

- **Save as plan** keeps it on this device, named after the venue, listed on the Event tab with **Open** and **Delete**.
- **Download plan (.json)** saves it as a file, to share or open on another device with **Open a plan or deployment file**.
- Open the plan, fill in the names on screen, or print it and fill them in by hand.

8. Saving and backing up

Everything is saved in this browser as you type. **Save deployment (.json)** keeps a whole deployment, times included, as a file. **Back up everything** on the home page saves every tool's work, plans included, in one file, and reminds you when a backup is due.

9. Phones, tablets and offline

The tool works on a phone or tablet, and the On the day buttons are big enough to tap.

Once opened with a connection, it works offline, and can be added to the home screen like an app: in Chrome, **Install app**; on an iPhone, **Share** then **Add to Home Screen**. On an iPhone the home-screen app keeps its own saved work, separate from Safari, so use **Back up everything** to move it across.

10. Troubleshooting

Problem	What to do
“Add at least one unit”	Add a unit on the Units tab first.
“Unit 2 has no callsign”	Give every unit a callsign.
No company at the top	Create a Company Profile on the home page, or use **Import company details**.
My deployment has gone	Browser storage was cleared, or this is a different browser. Restore your last backup on the home page, or open your saved .json.
“Not a plan or deployment saved from this tool”	The file is from another tool. Plans and deployments are .json files saved from the Deployment Maker.
